

Pro-Set Media Pro

AN AWARDED WINNING COMMUNICATIONS HEADSET DESIGNED FOR YOUR PERSONAL COMPUTER.

Headsets and microphones for computer use have traditionally been two buck wonders that are poor quality - at best. Heil Sound was commissioned by the U.S. Navy to solve this problem and design a high performance computer microphone headset.

The wizards at Heil Sound turned to their award winning PRO SET communications headset. Using a very high performance condenser microphone element, designed specifically for the requirements of the computer sound cards, the new Heil PRO SET MEDIA brings your computer to life with beautiful broadcast audio.

The PRO SET speakers are acoustically tuned and use the exclusive Heil Phase Reversal feature that allows the user to acoustically 'move' the sounds from front to back. By reversing the phasing switch, it creates a spatial widening sound field that makes program easier to understand.

The Heil PRO SET MEDIA comes to you with removable cotton ear pad covers that can be removed and washed. The comfortable vinyl ear pads they cover also can be removed should they every need to be replaced. A foam windscreen is fitted over the microphone and can easily be removed or replaced.

The three conductor 1/8" Black male connects to your STEREO audio output.
