

PL-2T Topless Boom

Heil PL-2T 'Topless' Mic Boom

The new HEIL PL-2T is truly the finest professional microphone boom available today. Absolutely silent as it is moved. Perfectly balanced and stays exactly where it is placed. Using a system of perfectly balanced internal springs rather than the unsightly and mechanically unstable outboard springs used on booms of much lesser quality, the Heil PL-2 handles microphones up to 3.5 pounds in weight.

It's 'TOPLESS' !!!

That's right, you can remove the top and backs plate so that threading the mic cable inside the boom is easy. No more cable connectors to remove and replace!

The Heil PL-2T features a hollow channel that the microphone cable can be fed through and provides the perfect cable maintenance. No more wire ties !

The Heil PL-2T is shipped with the standard "C" clamp mount that will accept an 1.5" thick table. An optional flush mount is available which screws to the top of a surface.

The PL-2T accepts all of the industry standard 5/8" - 27 threaded mic clips or shock mounts. The chrome threaded stem can be locked into it's needed position depending upon the exact type of microphone or shock mount.

The new Heil PL2T now has internal springs that will support up to 3.5 lb microphones. It comes with a counterweight to accommodate lighter microphones.
