

## Traveler Dual Side "HTDS"

To answer the request of so many of our loyal Heil fans, we introduce the TRAVELER DUAL. The same great performance of our popular single side Traveler but now available with two headphones. Same adapters will attach perfectly. You just now have two headphones.

The Heil Traveler Dual is a very unique high performance dual sided headset. Our Traveler series headset's great, full audio is driven by our electret condenser element. A 3 way in-line pendant containing PTT and Frequency Up/Down eliminates the need to purchase an additional PTT switch; and adds convenience in operation and adjustment of your rig.

PTT and/or Frequency Up/Down may not work on all applications. Please check Microphone/ Cable Selection Chart for specific radio compatibility.

**Traveler HT Adapters**

A unique interface cable system utilizes various patch cables to allow the Traveler to be used on over 100 different radios, many popular HT units, your personal computer, cell phone and many more.

All adapters sold separately. Please see the Accessories section for all Heil Sound Traveler Adapters available and the Microphone/ Cable Selection Chart on the right to determine which adapters you need.

If you want to use the Traveler on an additional radio, you can purchase another interface cable for the radio specified.

The Heil Traveler Dual uses our high performance IC electret and of course, will NOT work in any way with the FT 100 Yaesu because of the multiplexing of it's audio, PTT and data signals all onto one single wire. The Traveler is not set up to work on the FT 100.

The perfect headset for back packing, mobile and portable use.
