MFJ-310

HT Rubber Duck Window Mount Clip

MFJs Window MountClip gets your antenna outside where it can radiate freely. It takes away the shielding effect of your car and gives maximum radiated power which increases signal strength and signal reception in busy areas.

Simply remove the antenna from your HT and place on the mount, then place the mount on your window and connect the coax bnc connector to your HT.

It's held in place when you roll up your window for a super lock tight hold. MFJ-310 works with any 144/440 MHz HT using a BNC connector.

Strong metal construction with rubber guarding protects window.

Comes with 10 ft. flexible mini RG-58 coax.

Also available with an SMA connector (MFJ-310S)
